

EXECUTIVE DECISION READOUT

Customer shopping behaviour

Five commercial decisions to make next

Commercial leadership readout · Subscriptions, loyalty, discounts, and targeting

Made with GAMMA

The analysis points to five commercial levers

Data indicates distinct opportunities across conversion, repeat frequency, and promotional efficiency.

Grow subscriptions

Make benefits more compelling for repeat buyers.

LEVER 01 · FREQUENCY

Build loyalty

Reward returning customers and move them toward Loyal.

LEVER 02 · RETENTION

Protect margin

Review discount dependence before scaling promotions.

LEVER 03 · MARGIN RISK

Focus the offer

Feature top-rated and best-selling products.

LEVER 04 · MERCHANDISING

Target precisely

Prioritize high-revenue age groups and express-shipping users.

LEVER 05 · ACQUISITION

SOURCE · Customer shopping behaviour empirical dataset, 3,900 purchase events

SO WHAT

These five levers form a closed operating plan: two drive lifetime value, one halts margin erosion, and two optimize capital allocation.

Made with GAMMA

Start with the decisions, then show the evidence

DATASET · 3,900 PURCHASES

The analysis combines 3,900 purchases, customer attributes, product details, promotions, shipping, reviews, and subscriptions to support leadership choices.

Decision lens

Where to invest, where to test, and where to protect margin.

Evidence base

Cleaned data, SQL business tests, and an interactive Power BI view.

SO WHAT Where to invest, where to test, and where to protect margin.

Made with GAMMA

Three questions should guide the next operating cycle

The technical workflow stays in the background; the leadership discussion stays on choices and trade-offs.

01

Question 01 · Retention

Subscription mechanics

Which customer behaviours are most connected to subscription and repeat purchase?

Goal: Identify loyalty inflection point

02

Question 02 · Unit Economics

Discount efficiency

Where are discounts driving value, and where are they eroding margin?

Goal: Eliminate margin-dilutive promos

03

Question 03 · Allocation

Targeted investment

Which products, age groups, and shipping experiences deserve more targeted investment?

Goal: Prioritize high-revenue segments

EXECUTIVE AGENDA · Defined for cross-functional alignment across Growth, Product, and Finance

SO WHAT

Aligning around these three questions ensures resource allocation addresses underlying customer economics instead of vanity metrics.

Made with GAMMA

The evidence is organized around value, preference, and loyalty

Lens	Evidence
Value	Revenue, average purchase amount, and high-spending discount users
Preference	Top-rated products and top products by category
Loyalty	New, Returning, and Loyal segments plus repeat-buyer subscription behaviour
Experience	Standard versus express shipping spend

SO WHAT

Use these lenses to decide where to scale, test, or investigate further.

Made with GAMMA

Leadership can turn the analysis into a focused test plan

Keep exact query outputs visible as evidence, but make the decision and next test the headline.

PRIMARY STANCE · SCALE

Proven demand

Scale subscription benefits and campaigns around verified product demand and high-rating categories.

Action: Channel budget into proven catalog champions

PRIMARY STANCE · TEST

Conversion hooks

Test loyalty tier thresholds, segmented promotions, and express-shipping messaging to accelerate repeat purchase.

Action: Deploy structured A/B tests on Returning cohort

PRIMARY STANCE · PROTECT

Margin discipline

Review discount-dependent products before increasing promotion depth to protect baseline contribution margin.

Action: Establish strict price floor on high-volume items

GO-TO-MARKET GOVERNANCE · Categorization based on SQL elasticity and spend queries

SO WHAT

Every commercial initiative enters one of three operational buckets: scale what works, test what accelerates, and protect what yields profit.

Made with GAMMA

Loyalty and subscriptions are the clearest growth decision

Purchase velocity reveals an inflection point where repeat buyers convert to subscription programs.

SEGMENTATION

Segment definitions

Classify customers into New, Returning, and Loyal segments using verified purchase history.

Baseline: Transaction volume tracking

EMPIRICAL HYPOTHESIS

The 5-purchase threshold

Test whether customers with more than five purchases exhibit a significantly higher propensity to subscribe.

Target: High-affinity repeat segment

EXECUTIVE DECISION

Retention investment

Approve a dedicated retention program that rewards repeat behaviour and explicitly promotes subscription benefits.

Decision: Immediate test approval

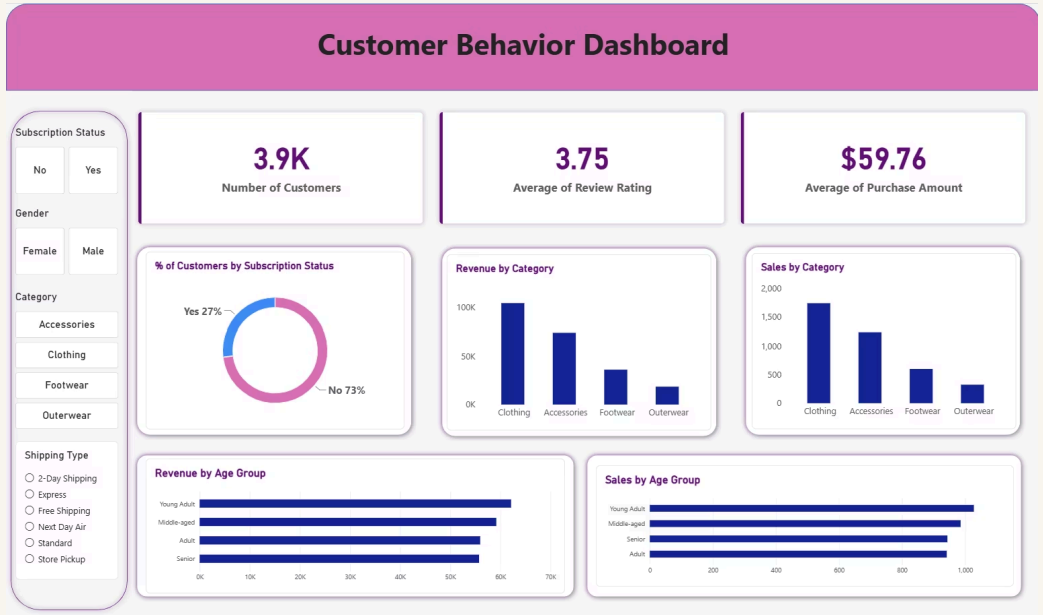

SOURCE · Customer segmentation analysis, SQL purchase frequency and subscription cross-tabulation

SO WHAT

Targeting customers precisely as they cross the 5-purchase threshold maximizes subscription conversion at minimal incentive cost.

Made with GAMMA

Use the dashboard to move from signal to decision

POWER BI INTERACTIVE VIEW · CLEANED DATA ENGINE

Integrated intelligence

Power BI brings cleaned data, SQL outputs, and customer lenses together so leaders can move directly from high-level overviews to specific segments, products, or experiences needing operational action.

Drill-down capacity

Filter by category margin, age bracket spend, and fulfillment type in real time.

SO WHAT

The dashboard provides self-serve validation for leadership, eliminating ad-hoc data requests during the test execution cycle.

Made with GAMMA

Approve five actions for the next test cycle

Decision needed: choose the first test, owner, and success measure.

1. Launch a subscription-benefit test for repeat buyers

2. Design loyalty rewards that move Returning customers toward Loyal

3. Review discount-dependent products for margin risk

4. Feature top-rated and best-selling products in campaigns

5. Target high-revenue age groups and express-shipping users
